

Career Speed Networking

Someone will give a brief overview of what CH Robinson does (third-party transportation logistics) and how IT plays a role. Then students will rotate through talking to IT employees!

IT Employees: Start with some brief details on your career path.

- What is your name and job title?
- After high school, how did you get to the job you have now? (College, apprenticeships, boot camp, knowing the right person, starting on the business side, self-taught, etc)
- What is the best part about your job?

Students: What motivated you to come here on a Saturday to learn more about working in technology?

After the IT employee introduces the basics, feel free to dive into any questions about working in IT, working in general, college/education/training, etc. Some possible questions:

- What does your workday look like?
- How do you keep on top of changes and new technology?
- What is your team like?
- What is your company like? What is your favorite thing about it? What is one thing you would change?
- How much time do you spend working independently compared to working with others?
- What did you think your career was going to be when you were in high school? If that's different than what you are now doing, what made you change your path?

After about 8 minutes, we'll rotate so students can talk to more IT employees!
